

## 38. Creating movement through Jump-cutting

**A jump Cut is simply when cut(s) are made within a single shot.**

### References

**Clip 38.1** - This sequence uses Jump cuts to create for the viewer a rhythmic impression of a girl's routine, from what would otherwise be a single tedious shot of the girl preparing for a night out.

**Clip 38.2** - This effect could be created either using the same technique or with a stop-motion animation package. Commonly used in Music Videos and Experimental film, the actor shifts slightly each time to create an impossible movement.
